

GRIP ON INTERNET CONTENT

China's online fight could further empower Beijing

Internet cos are using the threat of govt action as a cudgel against rivals. That could make the Communist Party the ultimate arbiter over the industry

LI YUAN
April 29

HOURS AFTER THE Chinese government imposed a record \$2.8 billion fine on Alibaba, a veteran internet entrepreneur urged regulators to do something similar to his company's biggest competitor.

Douyin, TikTok's Chinese sister service, is suing Tencent, China's biggest internet company, to allow users to share videos to Tencent's ubiquitous WeChat messaging service.

Alibaba, meanwhile, has applied to set up its own apps within WeChat, essentially daring Tencent to say no.

Lawsuits are flying and tempers are flaring on the Chinese internet, home to the world's

largest single group of internet users. Beijing made it abundantly clear late last year that it was serious about curbing the power of a handful of companies that dominate online life in China. Now China's internet companies are kowtowing to Beijing and trying to make their rivals look bad instead of correcting their own anticompetitive behaviour.

If the Chinese government's antimonopoly campaign works, the country's consumers stand to benefit. But the battle royale between companies could end up even further empowering the Chinese government, which already keeps a tight grip over online content. That could make the Communist Party, which controls the government and

the court system alike, the ultimate arbiter over the industry. Competition wouldn't decide winners. Beijing would.

American Big Tech has its own feuds, like the intensifying one between Facebook and Apple. Sometimes those feuds involve the government, like Microsoft and Google sparring in front of Congress. But none of those companies are trying to make the American government the final arbiter of the future of their industry.

The Chinese government has good reasons to rein in the power of Big Tech. The companies built the digital infrastructure that has become essential to ordinary Chinese lives, including shopping, banking, dining and entertaining. They didn't

get there just by innovating. They also built tall walls and wide moats, making the Chinese internet possibly the most siloed place in the digital world.

Out of the top 10 mobile apps with the most active users in China, Tencent developed or is a strategic investor in four of them, according to Analysys International, an internet data services firm in Beijing. Three are Alibaba's, two are the search engine Baidu's and one is ByteDance's Douyin.

Out of the top 30, 14 belong to what Chinese users call the Tencent camp. Five are in the Alibaba camp, four are owned by Baidu, and three are owned by ByteDance. Only four apps aren't affiliated with any of the giants. "Tencent will become Samsung," said the stock investor Hou Ning on Weibo, the social media platform, referring to the South Korean conglomerate that sells everything from computer chips to groceries to insurance. "It does pretty much everything except giving birth to children." (Weibo is aligned with Alibaba, which owns about a 30% stake in the company.)

For years, Alibaba prevented merchants using its services,

China reins in tech giants' finance arms after hobbling Ant

BLOOMBERG NEWS
April 29

CHINESE REGULATORS IMPOSED wide-ranging restrictions on the fast-growing financial divisions of 13 companies including Tencent Holdings and ByteDance, leveling many of the same curbs employed against Jack Ma's Ant Group Co in a crackdown on the tech sector.

Units of JD.com, Meituan and Didi were also among firms summoned to a meeting with several watchdogs including the central bank, which spelled out a raft of requirements including stricter compliance when listing abroad and curbs on information monopolies and the gathering of personal data. Companies must restructure their financial wings into holding companies as part of a broad effort to subject themselves to more rigorous supervision, and sever "improper links" between their existing payments services and financial products, the central bank, banking and insurance regulator, securities regulator and the forex regulator said in a joint statement Thursday.

Representatives for Tencent, ByteDance, JD, Meituan and Didi didn't immediately respond to requests for comment.

China has waged a campaign to rein in its internet titans as the government grew increasingly concerned over their growing influence over every aspect of Chinese life as well as the vast amounts of data they've amassed through providing services like online shopping, chatting and ride-hailing. The crackdown has already forced Ma's Ant Group to scrap its initial public offering while regulators have levied a record fine against affiliate Alibaba Group Holding.

"Nobody can escape the tough regulatory crackdown on fintech," said Zhang Xiaoxi, a Beijing-based analyst at Gavekal

Dragonomics. "While the requirements are broadly in line with those imposed on Ant, those who are considering listing need to wait till they rectify all the problems."

It's unclear how long the companies have to enact changes, or how it would affect their core operations. Companies like Meituan, JD and Tencent rely on their payments operations to drive their core operations in e-commerce, gaming and social media. Some, like ByteDance and Didi, are said to be exploring overseas initial public offerings and the new regulations may impose a stricter oversight of the process.

The firms were also ordered to break up their information monopoly and to conduct personal credit reporting services through licensed agencies. They should strengthen their capital structure and compliance, strictly implement regulatory requirements and step up consumer protection mechanisms, according to the statement.

Baidu, Trip.com Group and Lufax Holding were among others summoned to the meeting. Regulators have pledged to

Vaccinating more than anywhere else, China still needs to speed up

REUTERS
Beijing, April 29

CHINA BECAME THE country to have administered COVID-19 vaccinations to more people than any other this week, but health authorities will need to accelerate the rollout to meet target to inoculate 40% of its population by the end of June.

China had administered a total of 243.91 million doses as of April 28, surpassing 234.6 million shots the United States has given.

But with population of 1.4 billion people, China has administered just 17.4 doses per 100 people, far behind the 71.1 administered in the United States, which has a population less than a quarter the size.

China has given around 4.4 million doses per day on average so far this month and the pace would need to pick up to at least 5.0 million doses to reach its end of June target.

Achieving that will test China's vaccine production capability, as some parts of the country are already grappling with tight supplies, a health official said. He said the supply crunch will ease "from May, especially after June" as production is being stepped up.

China's complete reliance on locally developed vaccines could complicate the country's immunisation drive, as insufficient data on their efficacy has been released, and they have shown modest efficacy so far.

China approved five domestically developed vaccines, and four of them reported efficacy rate of between 50.7% and 83.5% against symptomatic COVID-19 disease, lower than readings from rival shots developed by Moderna, Pfizer and its partner BioNTech.

The fifth Chinese vaccine, developed by a state microbiology research agency, has yet to release efficacy data, and Sinovac is the only vaccine maker that has released detailed data so far.

"This is going to be a problem going forward in getting people to fully trust the vaccines," said Nicholas Thomas, professor in health security at the City University of Hong Kong. While real world data showed some of the Chinese vaccines are effective in preventing symptomatic infection and hospitalisations, there is no sufficient data yet to decide how much these vaccines help reduce transmission.

Despite record inoculation numbers, it's hard to measure them with real world data in China, as the country has largely stamped out local transmission through strict quarantine measures and routine screening tests.

That leaves China to rely on data from coronavirus-hit countries that use its vaccines such as Chile, Brazil and Indonesia.

Wu Zunyou, chief epidemiologist at the Chinese Center for Disease Control and Prevention, said earlier this month that "whichever country gets the vaccination rate up to herd immunity first is likely to open up to the world".

Experts caution that many estimates on inoculation targets required to achieve herd immunity could be oversimplified in the absence of enough scientific data on the vaccines' ability to cut transmission. In general, they said using vaccines with modest efficacy would require more people to be inoculated.

Pandemic cost women \$800 bn in lost income last year: Oxfam

THE COVID-19 PANDEMIC had a greater economic impact for women due to over-representation in industries hardest hit by the crisis, according to a report by an international non-profit organization.

Women around the world lost at least \$800 billion in income in 2020, according to estimates by Oxfam International. "COVID-19 has dealt a striking blow to recent gains for women in the workforce,"

Globally, women lost more than 64 million jobs last year, representing a 5% loss and exceeding 3.9% loss for men, the report said. They found women more likely than men to drop out of the workforce or reduce hours during the pandemic, largely due to care responsibilities.

Global chip drought hits Apple, BMW, Ford

PETER VERCOE
April 29

THE GLOBAL CHIP shortage is going from bad to worse with automakers on three continents joining tech giants Apple Inc. and Samsung Electronics Co. in flagging production cuts and lost revenue from the crisis.

In a dizzying 12-hour stretch, Honda Motor Co. said it will halt production at three plants in Japan; BMW AG cut shifts at factories in Germany and England; and Ford Motor Co. reduced its full-year earnings forecast due to the scarcity of chips it sees extending into next year. Caterpillar Inc. later flagged it may be unable to meet demand for machinery used by the construction and mining industries.

Now, the very companies that benefited from surging demand for phones, laptops and electronics during the pandemic that caused the chip shortage, are feeling the pinch. After a blockbuster second quarter, Apple Chief Financial Officer Luca Maestri warned supply constraints are crimping sales of iPads and Macs, two products that performed especially well during lockdowns. Maestri said this will knock \$3 billion to \$4 billion off revenue during the fiscal third quarter.

"It's a fight out there and you have to be in daily contact with your suppliers. You need to make sure that you're important to them," Nokia Oyj Chief Executive Officer Pekka Lundmark said Thursday on Bloomberg Television. "When there is a shortage in the market, it is things like how important you are in the big picture, how strong your relationships are and how you manage expectations."

Meanwhile, companies that supply chips are reporting surging sales and pledging to invest billions to expand capacity as they struggle to keep up with demand. Qualcomm Inc., the world's largest smartphone chipmaker, said demand for

handsets is surging back as life returns to normal in some markets that had been locked down by the Covid-19 pandemic.

STMicroelectronics NV, a key chip supplier for carmakers, said profit for its auto and power unit jumped 280% in the first quarter. CEO Jean-Marc Chery credited a surprise rebound in demand as well as the industry's adoption of new, digital features that require more chips for the latest wave of supply chain constraints.

Samsung, which is both a producer and user of chips, said Thursday that component shortages will contribute to a slide in revenue and profit this quarter at its mobile division, which produces its marquee Galaxy smartphones.

The shortfall of critically needed semiconductors has forced the entire auto industry to cut output, leaving thin inventories at dealerships just as consumers emerge from Covid-19 lockdowns. In just the past week, Jaguar Land Rover Automotive Plc, Volvo Group and Mitsubishi Motors Corp. have joined the list of manufacturers idling factories.

"The second quarter is going to be worse for automakers than the first quarter," said Song Sun-jae, an analyst at Hana Daetoo Securities Co. in Seoul. "The chip-shortage problem could end up lasting longer, maybe into next year."

Beyond Apple, whose high-specification iPhones and aggressive demands typically place it at the front of the line, the dearth of chips threatens to dampen a nascent rebound in the entire smartphone market.
